

Case A (redundant network, topographic correction, no ramp removal)
 Velocity map: linear fit to 25 acquisitions, 2024-01-13 to 2024-12-26 (full year)
 Shorter GNSS comparison window: 2024-04-18 to 2024-10-03 (10 epochs)

Relative LOS velocity (mm/yr), Sentinel-1 descending; positive = toward satellite, relative to reference pixel

Outlined squares: 9×9-pixel (720 m) extraction patches; patch-median velocity ICMX 181.5, MMX1 -46.2 mm/yr (full-year values, not the GNSS-window rates). Grey: no data or outside the common temporal-coherence mask. Station coordinates: median 2024 NGL IGS20 positions. Sources: mintpy_redundant/audit/velocity_B_topo.h5; external_validation/gnss_los_results.json.
